內容摘要 (續):

< Ethic topic >

Sexual assault: Antimicrobial regimen of chlamydia - gonorrhoea & trichomonas

High dose OCP (Diane 21 P2D)

11 → 家庭專科

< EBM review >

P2D pathogens: *Neisseria gonorrhoea* - *Chlamydia trachomatis*  
Following strenuous physical activity (sexual intercourse)  
→ Ascites & l.w abdominal pain, suspect corpus luteum cyst rupture.

< key point >

D&C operation 完. Acute abdomen = peritoneal sign.  
第一個考慮: uterine perforation.

Dysmenorrhea treatment: NSAID + Buscopan.

Inpatient treatment of P2D: Clindamycin & Gentamicin.

< VS comment >

特別提醒: Every women should be ~~proven~~ considered pregnant until proven it is not.

Sudden onset of lower abdominal pain, associated to nausea & vomiting ⇒ ovarian torsion.
