Q10 CR 劉品穎

A10 R1 周若緯

hypothermia?

Gold standard for neuroprotection.

ischemic stroke treatment?

Antiplatelet. tPA

duration of hypothermia?

favor within 120-180 mins

management of shivering?

Meperidine, opioid... etc.

Complication of hypothermia?

Cardiac, immunologic, hematologic, neurologic.

Ventricular arrhythmia?

<28°C, almost never when >32°C

Intraoperative hypothermia for SAH?

<33°C will have a better outcome.

multisystem trauma mechanism?

ischemia & reperfusion injury.

lethal triad?

hypothermia, coagulopathy, acidosis

rewarming rate?

0.5°C/min & blood transfusion.

內容摘要 (續):

< EBM topic >

spontaneous hypothermia: active rewarm. damage control.
resuscitation

therapeutic hypothermia: buy time for hemorrhage control.
resuscitation.

< ethic topic >

ROSC after cardiac arrest should routinely treated as
hypothermia.

< VS comment >

therapeutic hypothermia: induction. maintainance. decoling.

continuous monitor for seizure attack.
EEG
