

## Case conference

Supervisor: VS連楚明  
Presenter: R1劉邦民  
103.03.12

- 61 y/o female
- Chief complaint: 家屬代述為腹痛，有腸阻塞過
- Triage: I
- T/P/R:37.9/93/20, BP=83/46, SpO<sub>2</sub>=95%
- Conscious: E4M6V5

## Present illness

- Abdominal pain for 6+ hours today
- Progressive after lunch
- Diffuse intermittent cramping
- Nausea/vomiting(+)
- Flatus(+) 3 hours before, no stool for 1 day
- 這幾天仍有排便
- 上個月: 因adhesive ileus & bezoar impaction 住院, 有suggest OP 但拒,

## Past history

- Allergy: NKA
- Medical history:
  - Asthma
  - CVA
- Surgical history
  - Gastric ulcer s/p pyloplasty
  - Bezoar impaction s/p exploratory laparotomy

## Physical examination

- Cons: ill-looking
- Head & neck: supple
- Chest: smooth respiration
- abdomen: absent bowel sounds, left CV knocking tenderness(+-)
- Extremity: cool extremity

## Impression

- Septic shock with peritonitis, definite etiology?

## Management(1811) 0h8m

- Triage:
- On monitor
- N/S 500 ml IV ST, then run 80 ml/hr
- NPO(1230)
- CBC/DC/Platelet
- Na, K, AST, Cr, lactate
- PT/PTT
- B/Cx2
- KUB
- Invanz 1 gm ivd st
- Morphine 6 mg iv st (VAS:9)

## Laboratory data

檢驗項目名稱	檢驗值	檢驗值單位	檢驗項目名稱	檢驗值	檢驗值單位
CBC/Platelet/DC	*****		Differential count	*****	
WBC	1.9	X1000/ul	Segmented Neutro.	46.0	%
RBC	4.21	million	Lymphocyte	18.5	%
Hb	11.7	gm/dl	Monocyte	2.0	%
Ht	35.9	%	Eosinophil	0.5	%
MCV	85.3	fL	Basophil	0.0	%
MCH	27.8	pg	Atypical lymphocyte	0.0	%
MCHC	32.6	%	Band	31.5	%
RDW	14.3	%	Metamyelocyte	1.5	%
Platelet	205	x1000/ul	Myelocyte	0.0	%

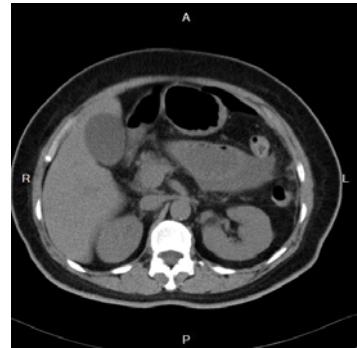

## Laboratory data

檢驗項目名稱	檢驗值	檢驗值單位	檢驗項目名稱	檢驗值	檢驗值單位
GOT(AST)	10	U/L	PT	13.2	second
Creatinine	0.72	mg/dL	Normal control	10.8	second
eGFR	82.35		INR	1.22	Ratio
Na	134	mmol/L	APTT	24.8	second
K	3.7	mmol/L	Normal control	33.4	second
			APTT ratio	0.74	
檢驗項目名稱	檢驗值	檢驗值單位	Lactate	15.8	mg/dL

## Management

- (19:21) (1h18m)
- Abdominal CT with/without contrast
  - (19:34)
  - Bain ½ amp iv st

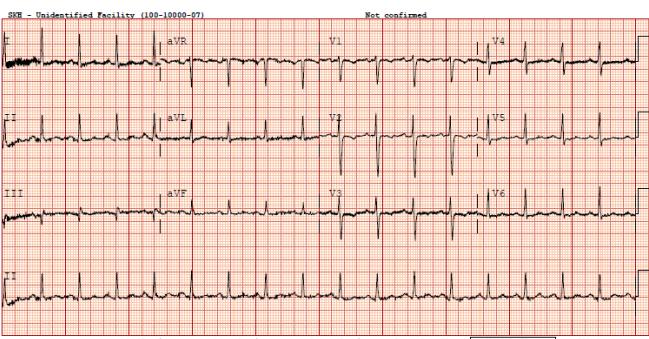

## Abdominal CT

## management

(2007)

- Consult GS doctor
- On NG with decompression
- Pre-OP evaluation(CXR, EKG)

## GS doctor note

- Hollow organ perforation, suspected jejunal perforation with internal herniation
- Arrange OP

## Management

(2050)

- On Foley catheter
- (2114) (3h11m)
- Sent patient to OR

## OP finding

- Pre-OP diagnosis : hollow organ perforation
- OP method: segmental resection of small bowel
- Post-OP diagnosis: bezoar impaction with perforation of small bowel
- OP finding:
  - One 1 cm perforation 150 cm from treitz ligament with one 5-6 cm bezoar impacted at proximal site of stricture 5 cm distal to perforation

## Hospitalization course

Day 2	Ceftriaxone 2 g iv Q12H (Day 2-9) Metronidazole 500 mg iv Q8H(Day 2-9)
Day 5	Hb: 7.8(11.7), pRBC 2U transfusion
Day 10	On liquid diet one fever episode (WBC:13100->12600 S:80) → add back ceftazidime + metronidazole
Day 14	on residual diet

## Discussion

- Small bowel obstruction (Rosen 7<sup>th</sup>, chapter 90; uptodate)

### BOX 90-2 LESIONS CAUSING SMALL BOWEL OBSTRUCTION

#### Intrinsic

Congenital (atresia, stenosis)  
Inflammatory (Crohn's disease, radiation enteritis)  
Neoplasms (metastatic or primary) 15%  
Intussusception  
Traumatic (hematoma)

#### Extrinsic

Hernias (internal and external) 15%  
Adhesions >50%  
Volvulus  
Compressing masses (tumors, abscesses, hematomas)

#### Intraluminal

Foreign body  
Gallstones  
Bezoars  
Barium  
*Ascaris* infestation

## Risk factor

- Prior abdominal or pelvic surgery
- Abdominal wall or groin hernia
- Intestinal inflammation
- History of, or increased risk for neoplasm
- Prior irradiation
- History of foreign body ingestion

Uptodate

## Clinical manifestation

- Nausea/Vomiting
- Cramping abdominal pain (crescendo- decrescendo pattern)
- Obstipation (inability to pass flatus or stool)
- more proximal → more discomfort and shorter between onset of symptoms and presentation
- Intermittent, colicky pain shifted to constant, severe pattern → development of complications(perforation, ischemia)

<h3>Diagnostic tool</h3> <ul style="list-style-type: none"> <li>Plain film(at least two films) <ul style="list-style-type: none"> <li>– Supine film + upright or decubitus film</li> </ul> </li> <li>CT scan <ul style="list-style-type: none"> <li>– defining the site of obstruction and possible cause</li> </ul> </li> </ul>	<h3>Management</h3> <ul style="list-style-type: none"> <li>Conservative treatment <ul style="list-style-type: none"> <li>– Intravenous hydration</li> <li>– NG decompression</li> </ul> </li> <li>Antibiotic (cover GNB and anaerobe) <ul style="list-style-type: none"> <li>– When surgery planned or suspected vascular compromise/intestinal perforation</li> </ul> </li> <li>Surgical intervention <ul style="list-style-type: none"> <li>– No S/S relief after short time of NG decompression</li> <li>– Symptoms persist after 48 hours of conservative treatment</li> </ul> </li> </ul>
<h3>Gastric bezoar</h3>	<h3>Risk factor</h3> <ul style="list-style-type: none"> <li>Gastric dysmotility <ul style="list-style-type: none"> <li>– underlying anatomic abnormality <ul style="list-style-type: none"> <li>• 70-94% gastric surgery</li> <li>• 54-80% vagotomy and pyloroplasty</li> </ul> </li> <li>– Gastroparesis</li> </ul> </li> <li>Gastric outlet obstruction</li> <li>Dehydration</li> <li>Drug <ul style="list-style-type: none"> <li>– anticholinergic agents and opiates</li> <li>– insoluble carrying vehicle (enteric-coated aspirin)</li> <li>– high hydroscopy, defined as the ability to attract and retain water (eg, psyllium and wheat dextrin)</li> </ul> </li> </ul>
<h3>Management (for gastric bezoar)</h3> <ul style="list-style-type: none"> <li>Chemical dissolution: <ul style="list-style-type: none"> <li>– Coca-Cola (50%), acetin (50%), Cellulase (83-100%)</li> <li>– AE: partially dissolved → distal bowel obstruction</li> </ul> </li> <li>Endoscopic removal</li> <li>Adjuvant prokinetics: Metoclopramide (10 mg PO TID+HS)</li> <li>Surgery <ul style="list-style-type: none"> <li>– fail chemical dissolution and endoscopic therapy</li> <li>– complications including obstruction and significant bleeding</li> </ul> </li> </ul>	<h3>Prevention of recurrence</h3> <ul style="list-style-type: none"> <li>increase water intake</li> <li>Diet modication (eg, avoid persimmons, stringy vegetables, and high fiber foods)</li> <li>chew food carefully</li> <li>underlying motility disorder evaluation</li> <li>seek psychiatric evaluation if needed</li> </ul>
