內容摘要：

- (填寫說明：1. 如有附件請註明，如簡報檔、全文檔等
2. 需有問題與討論：請註明姓名並包含醫學倫理及 EBM 之應用
3. 需有總結，請註明做結論者【主持人】姓名
4. 請自行編排頁碼)

Topic: 72 hr 再入院

主持人: CR 曾理銘 / VS 翁健瑞

地點: 同新園

紀錄: 羅志威

Q1 翁健瑞: How to estimate a mediastinum on CXR

A1 紀博仁: stand & supine: $>6\text{cm}/8\text{cm} \rightarrow$ wider
從 aortic arch level 量橫徑

Q2 翁健瑞: CT finding how to explain the $\frac{S}{S}$

A2 羅志威: type B aortic dissection extend to common iliac a.
 $\rightarrow$ 雙下肢 $\Delta\text{BP} \geq 20\text{mmHg}$

Q3 曾理銘: Common management of aortic dissection?

A3 薛宇君: Type A $\rightarrow$ OP; Type B: control BP;

Q4 曾理銘: how to approach the foreign body ^{ingest}

A4 宋世璽: example month, neck soft dissection

Q5 陳國智: why to perform esophageal/neck CT at first?

A5 羅志威: GI man considered about esophageal perforation

Q6 王宇倫: Any abnormal finding on the neck soft dissection

A6 曾理銘: irregular radiolucency over esophagus, suspicious mediastinum free air

Q7 陳國智: if no obvious barium radiolucency, when to perform repeat

A7 牛健銘: if $\frac{S}{S}$ worsen, or odynophagia & white crop
 $\rightarrow$ repeat CT

內容摘要 (續):

- Q8 翁健強: if V4-6 not clearly demonstrate ST-T change, White lead can help estim!
- A8 薛守君: aVR: reciprocal change side of lateral wall
- Q9 翁健強: poor R wave progression + ST-T change at.
- A9 許若齡: possible aneurysm! ECG
- Q10 王宗倫: poor R wave progression criteria
- A10 許若齡: ① V₁-V₃ R < 1, 2, 3 mm ② V₁-V₃ Qs pattern

Key point:

- ① Atypical presentation of aortic dissection
- ② clinical decision making in foreign body ingestion
- ③ early coronary artery presentation in ECG

VS Comment: (VS 陳國喬、王宗倫主修)

- ① if aortic dissection involve SMA → 腸子症狀, 不一定以背痛表現
- ② 當食道異物取出後, may still present w/ air leakage → need well education & highly suspicion of mediastinitis
- ③ 若 V4-6 和 aVR 都不清楚 → suggest repeat ECG

急診醫學科
