A1 R1 陳穎玲: consider right L5 sciatica firstly Q2 CR 蘇鈺鋒: nausea and vomiting but legs edema? A2 R1 林吉倡: consider renal or hepatic dysfunction Q3 CR 蘇鈺鋒: cause of hyponatremia of this patient? A3 Intern 陳詩宇: maybe related to previous nausea and vomiting Q4 CR 蘇鈺鋒: first step to differentiate hyponatremia? A4 Clerk 曾愷悌: collect blood osmolarity Q5 CR 蘇鈺鋒: correlation between low back pain and hydronephrosis? A5 R2 羅志威: malignancy related obstructive uropathy and bone metastasis Q6 CR 蘇鈺鋒: indication of image study to this patient? A6 R3 許力云: unexplained nausea and vomiting, and correlation of low back pain Q7 CR 蘇鈺鋒: possible explanation of delirium when 2nd visit? A7 R1 陳穎玲: favor electrolyte imbalance Q8 CR 蘇鈺鋒: how to prevent choking episode during hospitalization? A8 R1 林吉倡: suggest on NG decompression and IV suuply Q9 CR 蘇鈺鋒: possible prevention of expired outcome of this patient? A9 R3 許哲彰: early NG feeding if oral intake not tolerable Q10 CR 蘇鈺鋒: prophylactic antibiotics for this patient? A10 R2 羅志威: suggest Ceftazidime and Clindamycin if suspicion of aspiration pneumonia</p>	

內容摘要 (續):

<ethic topic>

1. early inform family of prognosis of symptomatic retro-peritoneal tumor
2. adequacy of discharge this patient at first time
3. beware of anti-psychotic medication to patient if organic problem persisted

<EBM review>

1. gastric outlet obstruction usually occurs after 1-4 hours digestion
2. always remember pregnancy possibility in child-bearing age in women
3. consider review previous medication if no definite cause of vomiting after serial studies

<Key point>

1. legs edema and nausea & vomiting: may remember to check nutritional status instead of give diuretics
2. always be cautious to give NSAID to elderly
3. unexplained nausea and vomiting needs complete survey

<VS comment>

1. Remember importance of NG insertion and check function
2. keep malignancy in mind when combined low back pain and unexplained nausea& vomiting
3. always remember check blood osmolarity when treating hyponatremia
