Cancer

Chronic renal insufficiency

Iron deficiency anemia

Q2. FELLOW 李尚：Cancer history?

A2. R2 羅志威：Any primary malignancy or metastatic cancer.

{Key points}:

1. To detect high-risk patients (need for blood transfusion, endoscopic or surgical intervention) with acute UGIB, GBS may be a useful risk stratification tool.
2. None of the 3 scoring systems has good performance in predicting rebleeding and 30-day mortality.
3. In predicting high-risk group, GBS is stronger than the other 2 score

{VS comment} :

FELLOW 李尚：

Same result in previous studies from UK , Netherlands,  
and Denmark
